

## Formance and Constructure have something in common – Improving NZ's Buildings

And we've teamed up to deliver rapid turnaround on structural engineering services for Formance projects.

Constructure have experienced structural engineers who are assigned solely to Formance projects and work closely with your designer.

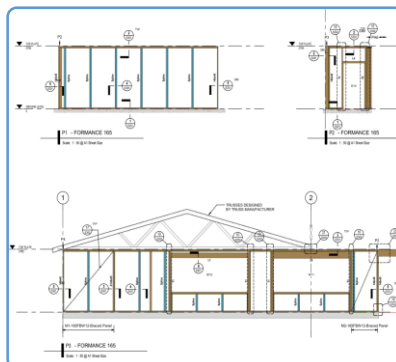

# FORMANCE

## The advantages of working with an engineer who understands SIPs.

Formance Structural Insulated Panels (SIPs) are a high performance building material for the ultimate home. They provide high insulation, high strength and a low eco footprint. The right material choice for ongoing high performance in hot and cold climatic zones anywhere in New Zealand.

When it comes to engineering it's helpful to have someone working with your designer who can offer quick feedback and useful suggestions for optimising the power of the Formance panels in their capacity as the structure of the building. Constructure understand panel layouts and can help you optimise them too

With a proven track record Constructure are ready to support your project with excellent engineering services.
